# Ability to install openstack is easy

---

1. `git clone https://github.com/openstack-dev/devstack/`
2. `./devstack/stack.sh`

If you treat OpenStack only like Vmware

- You only get 10% of it's advantage.

If you think install OpenStack is the major task

- You underestimate what it means to be a cloud

---

*May the force of **OpenStack** be with you*

have multi Center?

Need to separate hardware resources?

need to fix a bug?

Need to migrate?

Need to manage resources

Need to maintain?

## Plan an enterprise cloud is hard

1. *Mitaka commits > 30000, Liberty commits > 40000*  
*Do you know what changes and which feature are stable?*  
*So do you really understand how to drive your cloud?*

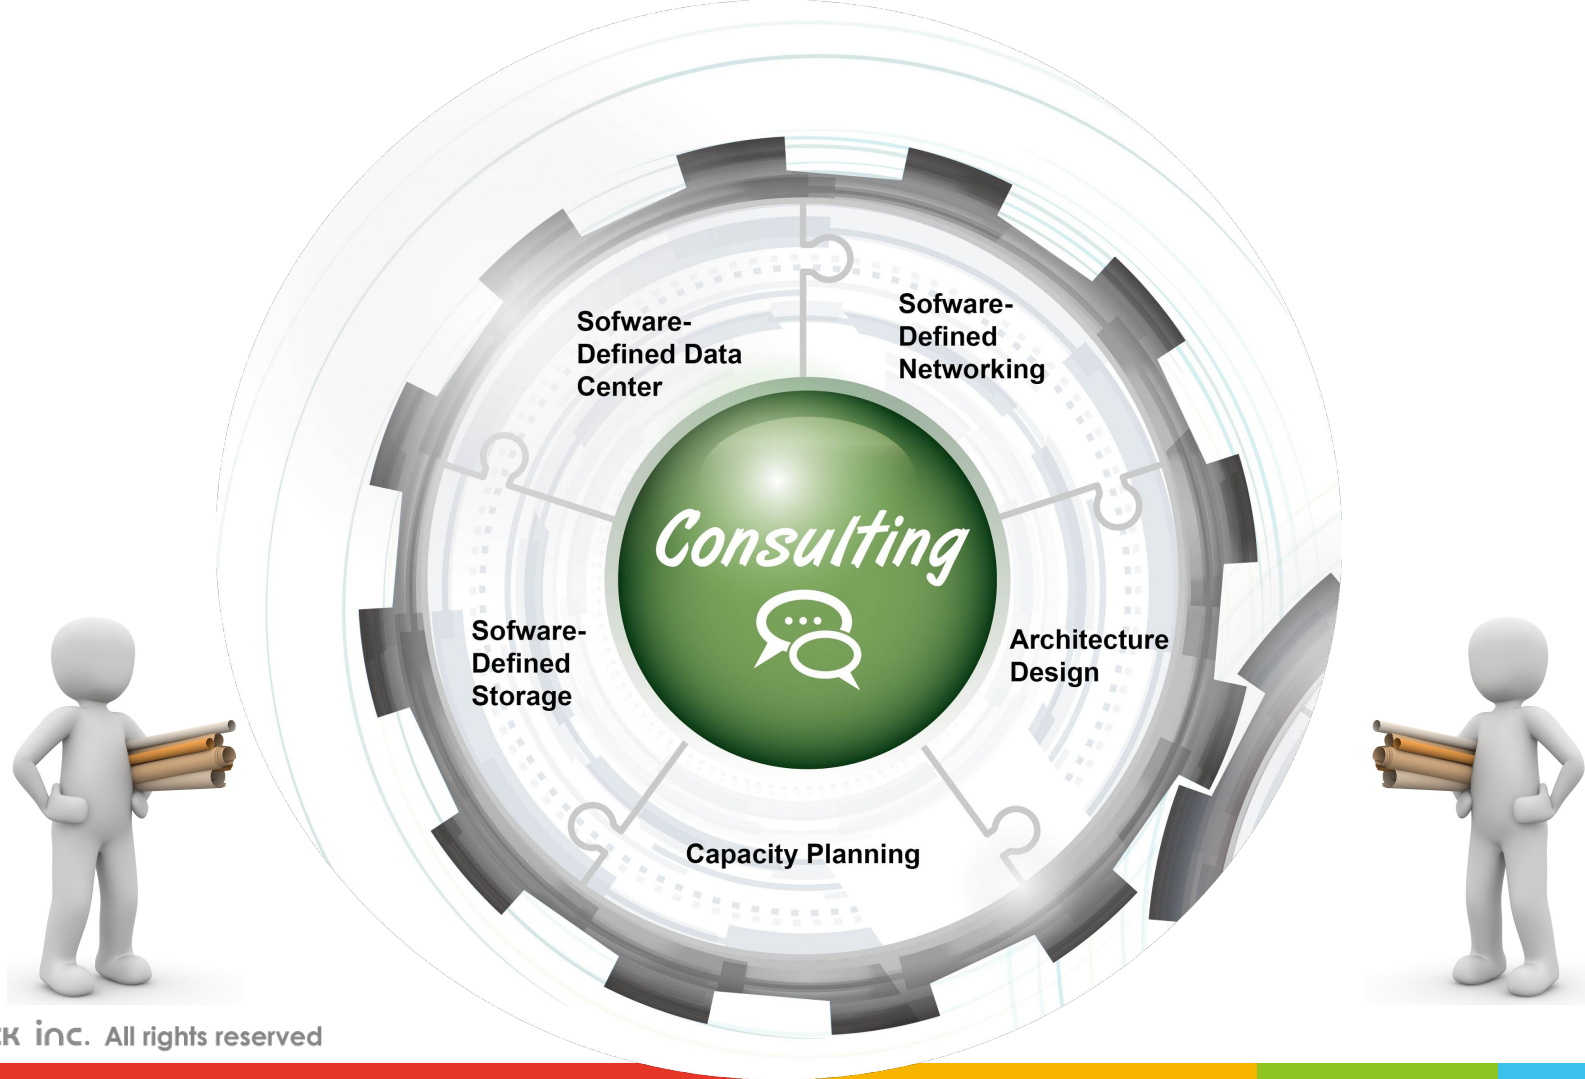

Let's try to make up the gap here

# Why Consultant So Important

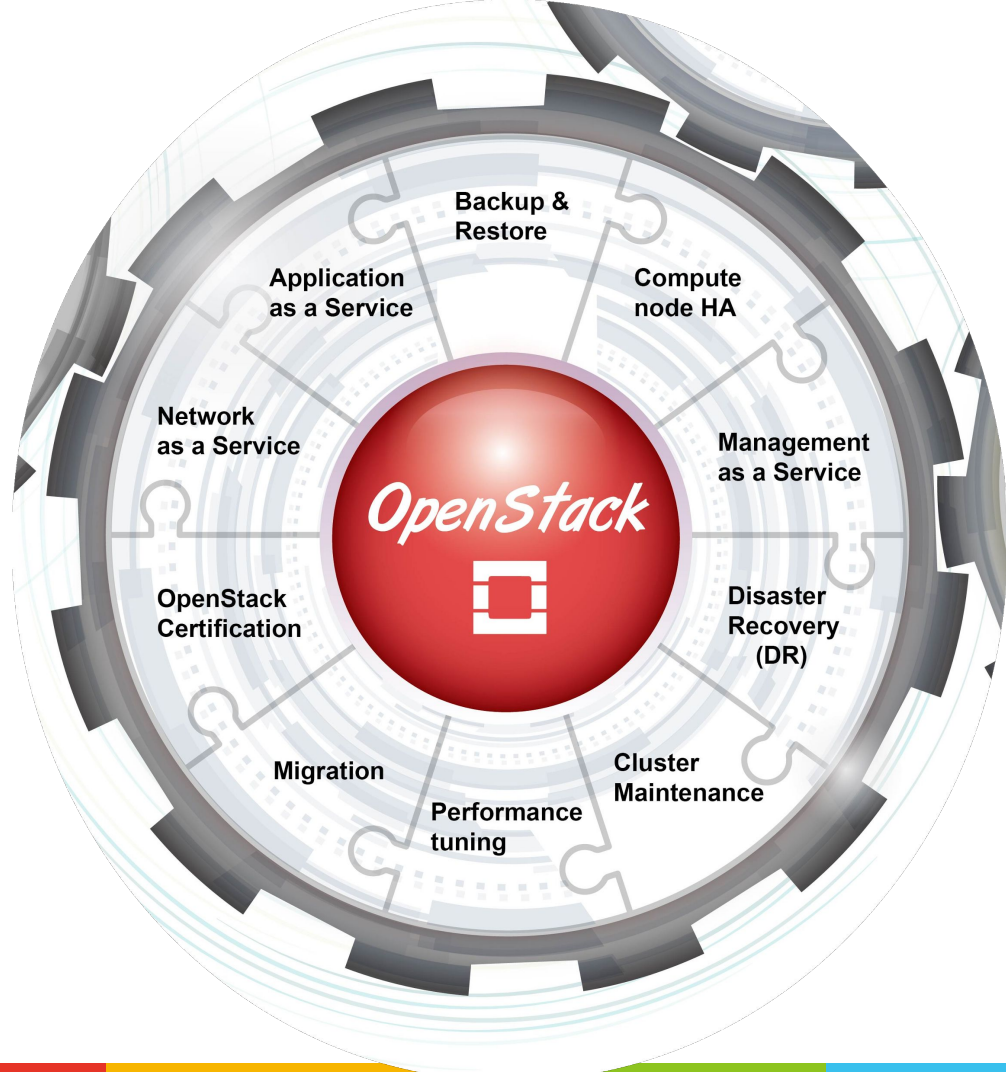

*Becouse Experts + Experiences means a lot **for a unique enterprise like you!***

# Beyond OpenStack

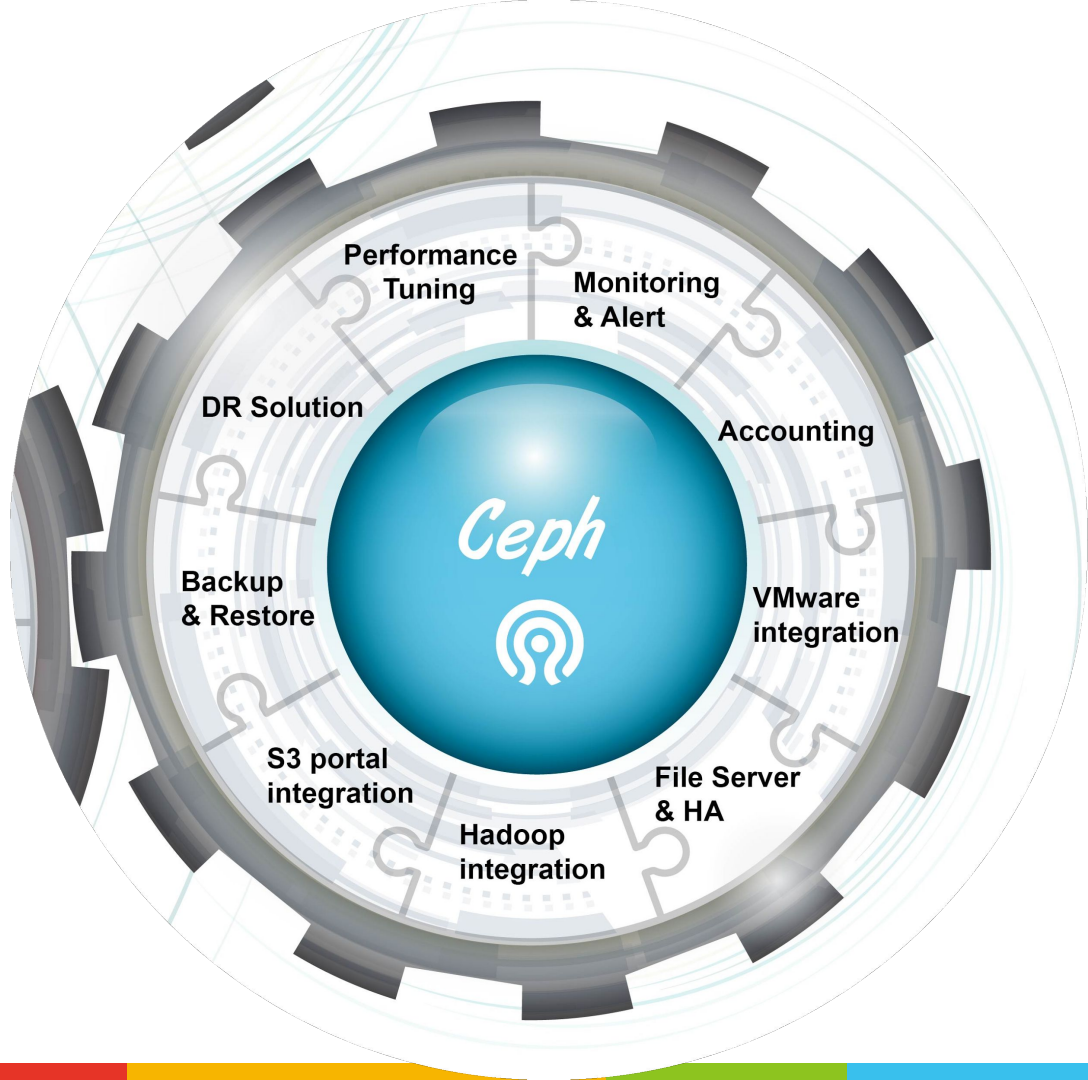

*Make up the gap for you*

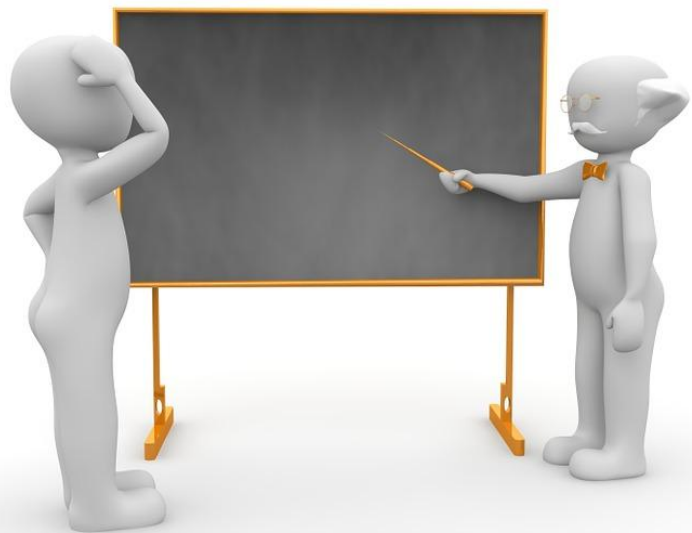

# Beyond Ceph

*Make up the gap for you*

# Why You Need Training

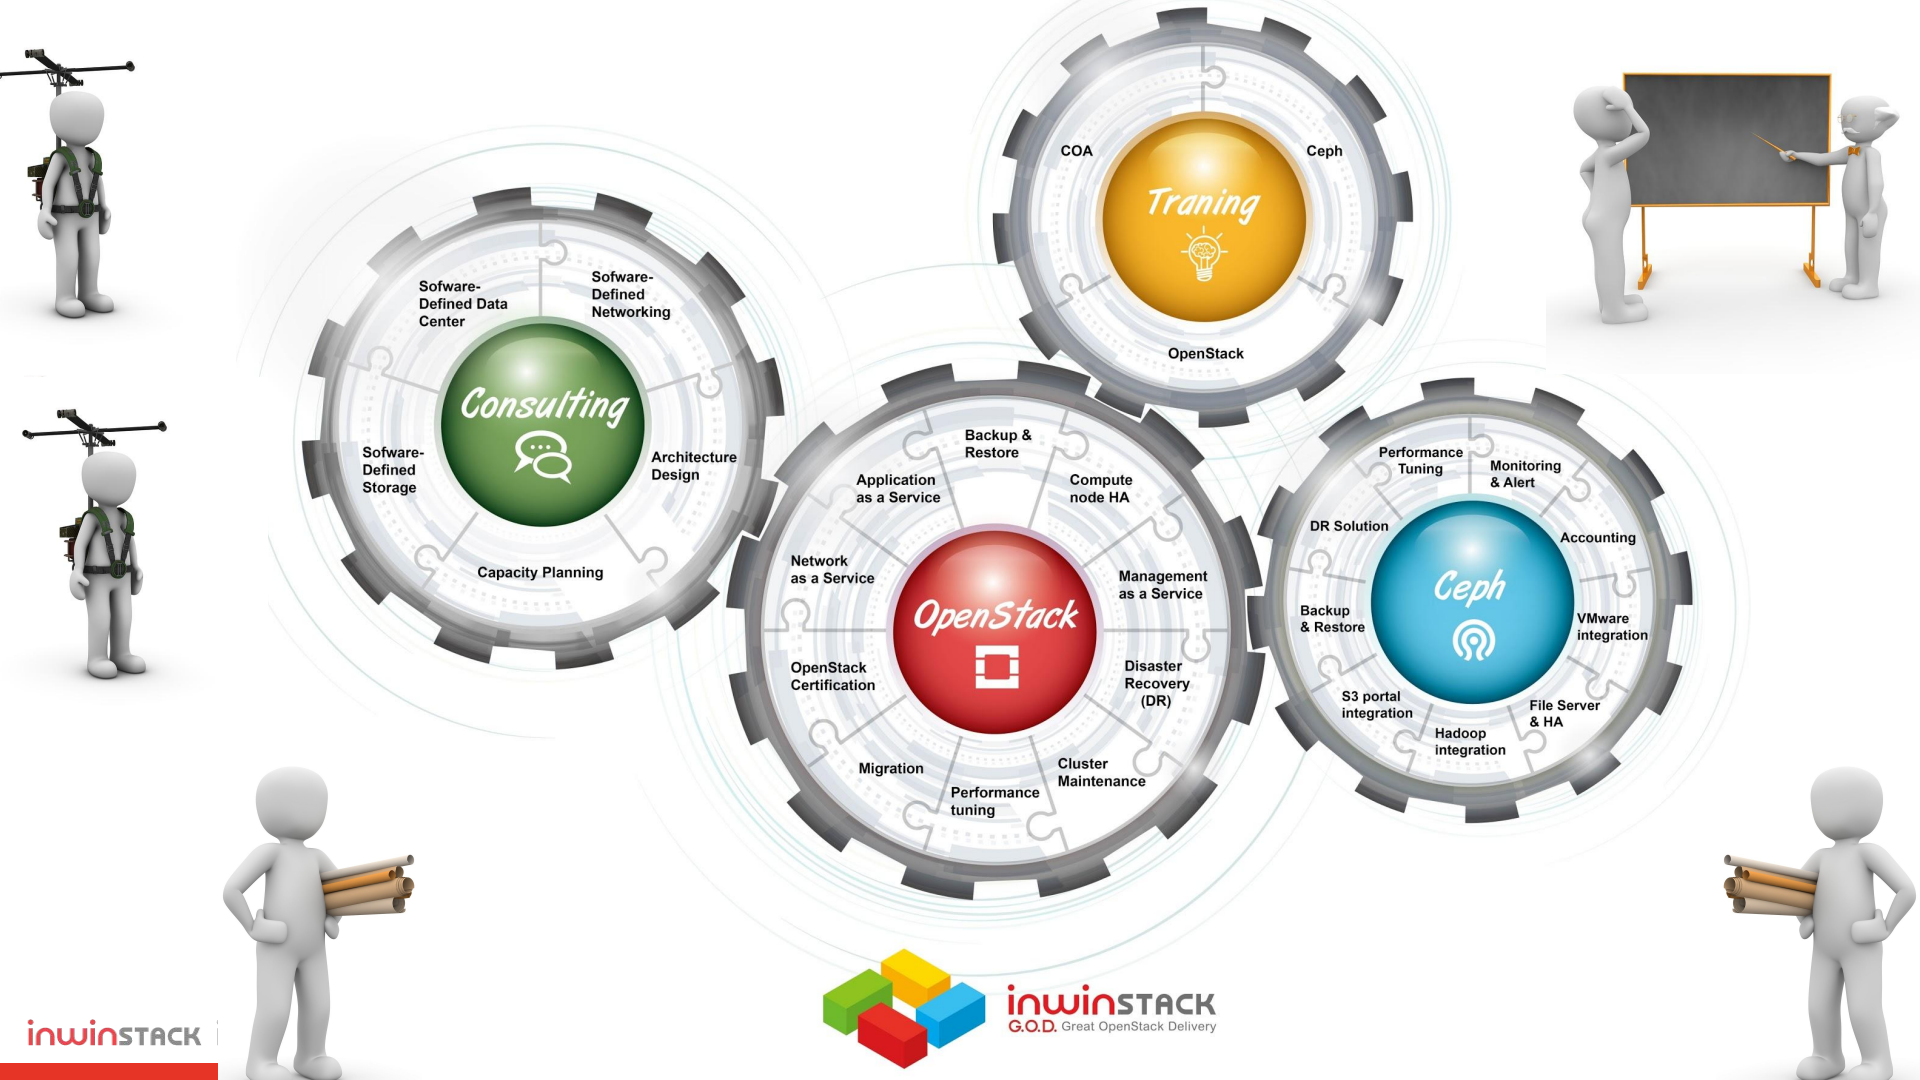

*Because you have an enterprise cloud, and you need to know about the limit of this spaceship!*

# Future of Enterprise Cloud

*May the force of **OpenStack** be with you*
